

- **Rated torque**

The torque generated when running at the rated voltage and rated current.

- **Rated revolutions per minute**

The revolution when running at rated torque.

- **No load speed**

Output shaft speed with no load when rated voltage is applied.

- **Momentary maximum current**

The maximum current that can be tolerated for one second without demagnetizing the magnets or causing other damage.

- **Torque constant**

The torque generated by the motor when a current of 1 A is applied.
